

RESUME

Nancy Verma
M: +91-6239462615
E: nancy555verma@gmail.com

Experience Summary:

Seasoned professional with a distinguished tenure of five years in the industry, I bring a wealth of expertise in the field of Data Engineering. Aiming to secure a challenging role that aligns with my skill set, I demonstrate an unwavering commitment to excellence and a profound passion for every aspect of data, encompassing data collection, processing, analysis, and visualization. With a solid foundation of industry knowledge, I possess a deep understanding of Data Engineering principles and methodologies. Leveraging my analytical acumen and problem-solving prowess, I am dedicated to driving innovation and delivering optimal data-driven solutions. With strong communication and collaboration skills, I am dedicated to delivering high-quality results and working closely with cross-functional teams to ensure successful project outcomes. I'm not only passionate about the work I do but also devoted to cultivating a positive and efficient team environment, fostering collaboration, and achieving collective success.

Technical Skills:

- **Programming Languages and Tools:**
 - Python
 - Unix Scripting
 - Git & GitHub
- **Big Data and Data Processing:**
 - Apache Spark
 - ETL
 - Apache Kafka
 - Azure Databricks
 - Apache Airflow
 - Microsoft Fabric
- **Database and SQL:**
 - SQL
 - RDBMS (PostgreSQL/Oracle)
- **Data Visualization and Analysis:**
 - Tableau
 - Data Analysis
 - Microsoft Excel
- **Cloud Services:**
 - Amazon AWS
 - Microsoft Azure

Work Experience History:

1. **Nov 2023-Present. 11 mos.**
Lead 1 – Software Engineering at UST Global. Full-time . Gurgaon

Responsibilities: MarketView:

- **Medallion Architecture for Data Migration:** Developed a Medallion Architecture to streamline the migration process, ensuring efficient data organization and enhancing quality across staging, trusted, and refined layers.
- **Apache Airflow for Workflow Orchestration:** Utilized Apache Airflow to automate and manage data workflows, facilitating reliable scheduling and execution of migration tasks for timely data availability.
- **Data Validation Between Oracle and Azure:** Implemented processes for data comparison between Oracle and Azure containers to ensure data integrity and accuracy throughout the migration, confirming that all data was successfully transferred and matched.

Skills Used: Azure Databricks . ADLS Gen2 . Python/Pyspark . Airflow . ETL . Healthcare Domain.

Claims Analytics:

Claims Analytics serves as a continuation of the MarketView project, utilizing data from the gold and silver layers to generate actionable insights. In this phase, Microsoft Fabric is utilised to create pipelines for data ingestion and transformation, enabling efficient processing and analysis of the claims data.

Skills Used: Microsoft Fabric . Data Analytics . Healthcare Domain

2. May 2019 – Oct 2023 · 4 yrs. 5 mos.

Assistant Manager IT at (Bank of Baroda) · Full-time · Mumbai

Bank of Baroda is a prominent Indian multinational banking and financial services institution, providing a comprehensive range of banking products and services to individuals and businesses.

Responsibilities:

- **Unix Shell scripting:** Demonstrated expertise in Unix Shell scripting by developing and customizing menus for the Core Banking System. This involved automating daily tasks and creating CRON jobs to streamline system operations and enhance efficiency.
- **RDBMS:** Played a pivotal role in managing the supply chain finance application database. Applied advanced optimization techniques to improve query performance and developed complex SQL queries and stored procedures to generate insightful data reports. This contributed to informed decision-making and improved business processes.
- **Python:** Actively collaborated with project teams on various data engineering initiatives, leveraging Python for data processing, manipulation, and analysis. Utilized Python libraries and frameworks to develop efficient and scalable solutions, enhancing data workflows and driving project success.
- **Dimension modelling:** Demonstrated expertise in designing and implementing a dimensional model using the star schema approach for a relational database management system. This involved creating logical and physical data models, designing fact and dimension tables, and establishing relationships to facilitate efficient data retrieval and reporting capabilities.

Skills Used: Unix Shell scripting · RDBMS (e.g., Oracle, PostgreSQL) · SQL optimization, and advanced query development · Python · Collaboration and teamwork · Dimensional modelling using the star schema approach · Logical and physical data modelling · Fact and dimension table design · Data retrieval and reporting · Problem-solving and optimization techniques ·

Education:

2013-2017: Bachelor of Technology in Computer Science Engineering
UIET – Panjab University (Chandigarh).

2012-2013: Senior Secondary (Non-Medical)
GSSS, Chamba (Himachal Pradesh).

Projects Delivered:

I have delivered several projects using different tools and technologies. A few of them are:

1. DATA ANALYSIS/VISUALIZATION:

Tools: SQL, Tableau

Provided valuable insights to the business team by creating interactive dashboards that showcased application and business performance metrics. These dashboards enabled data-driven decision-making and facilitated a deeper understanding of key performance indicators.

2. DATA PIPELINE:

Tools: Azure Data Factory, Azure Databricks, Apache Spark, Spark SQL, Python, Tableau

Developed an end-to-end data pipeline project, encompassing data ingestion and transformation. Leveraged Azure Data Factory for efficient data movement, utilized Azure Databricks and Spark SQL for data transformation, applied Python for additional processing, and visualized the transformed data using Tableau. This comprehensive pipeline enabled seamless data flow and facilitated actionable insights.

3. DATA PROCESSING:

Tools: Apache Kafka, Pandas, Amazon S3, Amazon EC2, AWS Glue Crawler, Amazon Athena

Conducted data sampling of large datasets to simulate real-time data environments. Leveraged Apache Kafka for data streaming, utilized Pandas for data processing and transformations, and employed Amazon S3 and EC2 for scalable storage and computing. Leveraged AWS Glue Crawler and Amazon Athena for data cataloging and querying, respectively. This project demonstrated efficient data processing techniques and facilitated analysis on representative datasets.

Acknowledgement:

I hereby declare that the details furnished above are true and correct to the best of my knowledge and belief.
